

(a) Shared conditioning Condition preparation

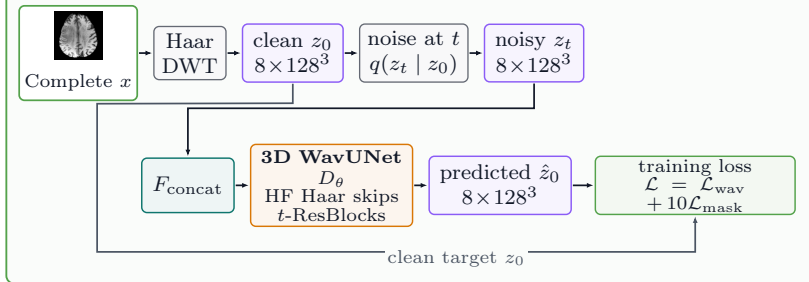

Concatenation

$$F_{\text{concat}}(z_t, c_v, s) = [z_t \parallel c_v \parallel s]$$

$8 + 8 + 1 = 17$ channels at 128^3

(b) Training

(c) Inference: reverse sampling and $N = 5$ aggregation

One EMA checkpoint; five case-stable noise seeds.
